# ❖ DSIL Design Thinking Worksheet

Empathy

Gain a new perspective! Understand your story through your own lens and one other viewpoint.
Define

Select which specific problem in your story you want to work on **right now. What is the actionable problem?**

Ideation

List four ideas to solve your problem. Aim to make two ideas radical!

Prototype

Get your solution out of your head! Use the storyboard or build it in 3D with basic supplies.

Now, show your solution to someone else and get feedback. How do they think it works? How would they improve it? Then, make another, better version.

Test

When you think you have a well-informed solution with lots of feedback, make it resilient by putting it into practice in a small way over a longer period of time. Learn from it to make it better!
